

Grammata Educación solves the problems of low connectivity in the classroom

- *The Spanish company together with Intel® is attending the Bett Show in London for the world presentation of Intel's Education Content Access Point device.*
- *With the new device, the company improves its offering and covers all the digital education needs of educational establishments.*
- *The innovation marks another milestone in the strategic alliance between the Spanish Company and the tech giant to develop new educational resources*

[Grammata Educación](#) travels to the Bett Show in London (21-24 Jan) for the world presentation of Intel's Education Content Access Point, a device that will form part of its education solution offering.

The attendees can learn all about its functionality at stand C270 of the [ExCel London](#).

The new device will solve one of the biggest problems that affects digital classrooms: null, intermittent or low connectivity. An incident that provokes interruptions and drop outs in class and in many cases discourages the educational establishments when it comes to joining the digital education revolution.

It is usually the case that the classrooms do not have enough bandwidth for the constant use by various students at the same time. Therefore, the system overloads and the internet connection drops out, which prevents the proper distribution of the contents; teacher-student and vice versa.

Intel® Education Content Access Point device avoids this situation, as it obtains its content and selected activities from the teacher, it **stores** and **distributes** them to the students. In this way, the students can work without the need to be connected to the Internet.

The release of the device, of reduced size and portable, that has been possible thanks to the strategic alliance that the Spanish Company maintains with the tech giant in the development of new educational resources.

All requirements catered for

Grammata Educación 360º is the name with which the company offers its package of educational resources. It is based on a complete solution for schools and universities (software + connectivity + compatibility + devices).

The solution includes a complete **Educational Platform** designed to group all the contents and applications necessary for the classroom, in a unique environment and controlled by the teacher, in which management system of the educational establishment can be integrated.

It includes tools to manage the classroom, competency management (personalized for each student), personalized desktop, apps and copyright free eBooks.

The software is accessible from any platform (Windows 7, Windows 8, Android and HTML 5) and from any device (PC, laptop or tablet).

The solution also includes its own line of devices designed for the education sector (tablets y laptops).

About Grammata Educación

Grammata Educación is a company that was founded at the start of 2012 with the challenge of revolutionizing teaching with the use of technology. After heavy investment in R&D, the company created a unique software that is compatible with other systems that allow the management of educational digital content in a simple and easy manner.

Currently, the company offers educational platforms, devices, connectivity and complete implementation (Consulting, hosting, licenses).

The company is present in Spain, Columbia, Mexico and Argentina.
